To: [Robey, Bob](#)

Hi Bob –

At your earliest convenience, please proceed with release of HASH v. 2.x (C14043/LA-CC14-003) under the appropriate Apache open source software license.

In accordance with LANS' prime contract requirements, Christine Ramos in FCI has notified DOE-Albuquerque of our intent to release the software as open source. Because the software was funded by ASC and therefore has a sponsor "pre-approval" for OSS release, you may proceed. When you have the url from which the software may be downloaded, please send it to me and Christine so that we can provide it to DOE as well as link it on the FCI website.

Best Regards,

Kathleen

Dear Robert Robey,
Your software titled, 'Hash, Version 2.x' has been assigned LA-CC-14-004. This software is to be released as open source, which requires review and approval by the appropriate DOE Program Office. To facilitate their review, we have determined that if DOE declines to release this software as publicly available open source, it would be subject to export control under Department of Commerce regulations, and classified as ECCN (Export Control Classification Number) EAR99. If released as open source, the software will be publicly available and not subject to export control. Until the DOE approval is obtained, the software should be treated as export controlled. DOE reserves the right to release or deny release of the software as open source.

Export Control, SAFE-3
